Syntax for **postscript enhanced** option

enhpost is the product of David Denholm and Matt Heffron.

This guide is the product of Dick Crawford.

	text	result
Superscripts are denoted by ^:	’10^{-2}’	10^{-2}
Subscripts are denoted by _:	’A_{j,k}’	$A_{j,k}$
Braces are not needed for single characters:	’e^x’	e^{x}
Use @ to align sub- and superscripts:	’x@^2_k’	x^{2}_{k}
Put the shorter of the two first:	’x@_0^{-3/2}y’	$x_{0}^{-3/2}y$
...rather than:	’x@^{-3/2}_0y’	$x^{-3/2}_{0}y$
Font changes are enclosed in braces:	’{/Helvetica m}’	m
...size, too:	’{/=8 m}’	m
...or both:	’{/Helvetica=18 m}’	m
Characters can be specified by code:	’{\120}’	P
...which is how to get nonkeyboard characters:	’{\267}’	•
Use keyboard characters or codes for other fonts:	’{/Symbol p\271 22/7}’	π≠ 22/7
Everything outside braces is in the default font:	’P = {/Symbol r}kT’	P = ρkT
Space of a given size can be inserted with &:	’<junk>’	<junk>
	’<&{junk}>’	< >
Special characters (^,_,{,},@,&,\) can be escaped by \:	’f\{x,y\}’	f{x,y}
...or \\ if within a double-quoted string:	"f\\{x,y\\}"	f{x,y}

Everything can be done recursively:

the text ’{/Symbol=18 \362@_{/=9.6 0}^{/=12 \245}}
{/Helvetica e^{-{/Symbol m}^2/2} d}{/Symbol m = (p/2)^{1/2}}’

produces the result: $\int_{0}^{\infty} e^{-\mu^{2}/2}\, d\mu = (\pi/2)^{1/2}$

Note how font sizes and definitions are preserved across pairs of braces.

The default font for this page is /Times-Roman=12. These and other options may be changed on the command **set terminal postscript**. See the manual or **help postscript** for details.

PostScript Character Codes

T = text (here Times-Roman) S = Symbol Z = ZapfDingbats E = ISO Latin-1 encoding
(the "E" character set is accessed via an option on "set encoding")

	T	S	Z	E		T	S	Z	E		T	S	Z	E		T	S	Z	E		T	S	Z	E
